POPVERSE DESIGN SYSTEM & ARCHITECTURE

Comprehensive Mobile App UX/UI Quality Audit Report

Production Readiness, Interaction Consistency, Accessibility & Trust Review

AUDITOR
Senior UX Engineer & UI Architect

PLATFORM
Flutter 3.x (iOS & Android)

AUDIT DATE
November 9, 2026

STATUS
Audit Complete • In Progress

1. Executive Summary

PopVerse has a remarkably strong cinematic design foundation: custom display typography (**Plus Jakarta Sans**, **Bebas Neue**, **Playfair Display**), a mature 3-tier surface hierarchy, sophisticated animations, Dynamic Island offline synchronization, 3D gyroscope tilt cards, and extensive skeleton loading via [redacted].

However, the audit identified **26 distinct UX/UI defects and architectural inconsistencies** that compromise perceived product quality, user trust, and production readiness.

Key Critical Findings:

1. **Critical Error Masking on Core Tabs:** In [redacted], when a network or Firestore failure occurs ([redacted]), the page silently caught nothing and rendered an empty state (*"Your Movie Watchlist Is Empty"*), misleading users into believing their saved collection was wiped. In [redacted], errors were rendered as raw unformatted red text with zero retry capability.
2. **Broken Auth Recovery & Abrupt Session Eviction:** In [redacted], any [redacted] unconditionally booted the user out to onboarding without explanation or retry options.
3. **Deceptive Mock Data & Ghost Functionality:** [redacted] contains hardcoded fake data ([redacted], [redacted], [redacted]) with a non-functional "SAVE" button, orphaned from navigation.
4. **Non-Interactive Legal Trust Elements:** Terms of Service copy on login was static and unclickable; Privacy Policy was missing entirely.
5. **Inconsistent Component Design & Iconography:** Three distinct back arrow icons were mixed across screens, while filter sheets deviated from the design system's [redacted].

2. Overall UX/UI Quality Assessment

The application was evaluated across 7 core dimensions against industry benchmarks (Apple TV, HBO Max, Letterboxd, Headspace):

EVALUATION DIMENSION	RATING (1-10)	BENCHMARK COMPARISON	SUMMARY EVALUATION
Visual Design & Theming	8.5 / 10	*HBO Max, Letterboxd*	High aesthetic quality; excellent color tokens, typography, and dark mode handling.
Motion & Perceived Speed	8.5 / 10	*Headspace, Apple TV*	Excellent skeleton shimmers, haptic integration, and smooth route transitions.
Trust & Legal Compliance	4.0 / 10	*Sub-par*	Unlinked legal text, missing onboarding privacy disclosures, hardcoded mock profile data.
Error Handling & Resilience	4.5 / 10	*Inconsistent*	AppErrorView is great where used, but primary tabs display raw text or mask failures as empty lists.
Microcopy & Guidance	6.0 / 10	*Average*	Missing helper text for long-press gestures, sarcastic notifications without CTAs, unprimed permissions.
Interaction Feedback & States	7.0 / 10	*Good*	AppSnackbar and AnimatedCheckButton are exemplary; multi-list sheet auto-closing needs refinement.
Information Architecture & Navigation	6.5 / 10	*Average*	Orphaned screens, route generator bug treating movies as TV shows, nested FAB collisions.

3. Comprehensive Audit: 12 Key UX/UI Areas

Every identified defect is categorized with its severity, user impact, implementation reference, and recommended fix:

Area 1: Legal Copy & Trust

CRITICAL (P0) LEGAL COPY & TRUST FIXED

Static, unclickable Terms copy; Privacy Policy entirely missing from sign-in and onboarding.

SCREEN / FEATURE: login_page.dart & onboarding_page.dart

REFERENCE: [illegible]

User Impact: Users cannot review terms or data policies prior to granting Google OAuth permissions. Fails App Store Guideline 5.1.1 (Data Collection & Storage) and GDPR compliance requirements.

Recommended Fix: Replace static [illegible] with an interactive rich text span linking directly to [illegible] and [illegible]. Add a privacy disclaimer banner on Slide 5 of onboarding.

Recommended Implementation:

```
[illegible]
```

Area 2: Empty States

HIGH (P1) EMPTY STATES FIXED **Completely blank screen when [illegible].**

SCREEN / FEATURE: watched_movies_page.dart

REFERENCE: [illegible]

User Impact: Users opening "Watched movies" with no entries see a pitch-black/empty page, appearing broken or frozen.

Recommended Fix: Return [illegible] with an icon, explanation, and a "BROWSE MOVIES" CTA navigating to the Explore tab.

MEDIUM (P2) EMPTY STATES PENDING **Hardcoded custom empty state without action button.**

SCREEN / FEATURE: custom_list_details_page.dart

REFERENCE: [illegible]

User Impact: Tells users to add titles, but forces them to manually backtrack rather than offering an instant "EXPLORE TITLES" button.

Recommended Fix: Replace with standard [illegible] providing [illegible] and an [illegible] callback.

LOW (P3) EMPTY STATES PENDING **Playful/sarcastic empty state lacks any recovery or navigation CTA.**

SCREEN / FEATURE: notifications_page.dart

REFERENCE: [illegible]

User Impact: Users hit a dead end with no way to jump into upcoming releases or explore shows.

Recommended Fix: Add [illegible] linked to the Up Next dashboard tab.

Area 3: Helper Text & Input Hints

HIGH (P1) HELPER TEXT & AFFORDANCE PENDING

Hidden gesture: Removing items from custom lists requires an undocumented long-press.

SCREEN / FEATURE: custom_list_details_page.dart

REFERENCE: [illegible]

User Impact: Low discoverability. Users cannot find how to remove titles from lists they created.

Recommended Fix: Add a 3-dot overflow icon button on list cards, or show a subtle helper subtitle in the app bar (*"Tap title to view • Long-press to edit or remove"*).

MEDIUM (P2) HELPER TEXT & INPUT EXPERIENCE PENDING

No character counters, no character limits, errors displaced into floating snackbars.

SCREEN / FEATURE: create_list_bottom_sheet.dart

REFERENCE: [illegible]

User Impact: Users can type unbounded strings; validation errors appear outside the sheet context.

Recommended Fix: Add [illegible] with counter, [illegible], and inline [illegible] on the input decoration.

MEDIUM (P2) HELPER TEXT PENDING **Zero guidance or instructions on obtaining or formatting GDPR export.**

SCREEN / FEATURE: import_tv_time_page.dart

REFERENCE: [illegible]

User Impact: Users do not know where to get the ZIP file or what data will be imported.

Recommended Fix: Add a step-by-step instruction card (*"1. Open TV Time > Settings > Privacy > Download My Data..."*).

Area 4: Success States

CRITICAL (P0) SUCCESS STATES & FUNCTIONAL INTEGRITY PENDING

"SAVE" button triggers no confirmation, no haptics, and performs no persistence.

SCREEN / FEATURE: edit_profile_page.dart

REFERENCE: [illegible]

User Impact: Severe trust breach: user believes edits were saved, but they are discarded.

Recommended Fix: Either properly wire [illegible] to Firebase Auth & Firestore with [illegible] and loading spinner, or remove this dead mock screen.

LOW (P3) SUCCESS STATES PENDING **Applying a filter gives no confirmation toast or visual acknowledgement.**

SCREEN / FEATURE: ShowsFilterBottomSheet & MoviesFilterBottomSheet

REFERENCE: [illegible]

User Impact: Users must infer filter application purely from list item changes.

Recommended Fix: Show a brief confirmation snackbar or active filter badge on the screen header.

Area 5: Error Handling

CRITICAL (P0) ERROR HANDLING & USER TRUST FIXED

Silent error masking: [illegible] is unhandled and falls through to empty state.

SCREEN / FEATURE: movies_page.dart

REFERENCE: [illegible]

User Impact: If offline or on Firebase failure, the user is told *"Your Movie Watchlist Is Empty"*. Creates panic that data was lost.

Recommended Fix: Explicitly check [illegible] and return [illegible].

HIGH (P1) ERROR HANDLING PENDING **Raw unformatted error text without retry capability.**

SCREEN / FEATURE: dashboard_page.dart

REFERENCE: [illegible]

User Impact: Displays [illegible]. Unprofessional, confusing, and traps user.

Recommended Fix: Replace raw [illegible] with [illegible] with an action retry button.

CRITICAL (P0) ERROR HANDLING & SESSION INTEGRITY PENDING

[illegible] kicks users out to [illegible] without notification.

SCREEN / FEATURE: main.dart (AuthGate)

REFERENCE: [illegible]

User Impact: Temporary auth failure or failed deletion abruptly evicts user to onboarding with zero feedback.

Recommended Fix: Keep user in authenticated shell when possible, dispatch [illegible], and only navigate to login on genuine unauthenticated state.

MEDIUM (P2) ERROR HANDLING PENDING

Raw exception string exposed directly to user: [illegible].

SCREEN / FEATURE: submit_feedback_sheet.dart

REFERENCE: [illegible]

User Impact: Technical jargon / stack trace fragments shown in snackbar.

Recommended Fix: Pass error through [illegible] for sanitized, human-readable error microcopy.

Area 6: Loading States & Skeletons

MEDIUM (P2) LOADING STATES PENDING

Generic [illegible] instead of poster grid skeleton.

SCREEN / FEATURE: custom_list_details_page.dart

REFERENCE: [illegible]

User Impact: Inconsistent loading experience compared to Explore, Movies, and Dashboard.

Recommended Fix: Render a 6-item dummy grid wrapped with [illegible] to maintain visual continuity.

HIGH (P1) LOADING STATES & RESOURCE SAFETY PENDING

Unprotected background processing: user can navigate back while import is running.

SCREEN / FEATURE: import_tv_time_page.dart

REFERENCE: [illegible]

User Impact: Accidental pop or swipe cancels long-running GDPR ZIP parsing and Firestore batch writes.

Recommended Fix: Wrap body in [illegible] with a cancel confirmation sheet.

MEDIUM (P2) LOADING STATES PENDING [illegible] **emits no loading state.**

SCREEN / FEATURE: auth_cubit.dart

REFERENCE: [illegible]

User Impact: Screen remains static after confirming deletion with no spinner, tempting repeat taps.

Recommended Fix: Emit [illegible] and show a modal barrier while account deletion completes.

Area 7: User Information Retention

CRITICAL (P0) USER INFORMATION RETENTION & PERSONALIZATION PENDING

Hardcoded initial display name [illegible] and static fake profile fields ([illegible] , [illegible]).

SCREEN / FEATURE: edit_profile_page.dart

REFERENCE: [illegible]

User Impact: Destroys credibility: displays someone else's name, birth year, and gender.

Recommended Fix: Initialize controller with [illegible] or remove the orphaned page.

MEDIUM (P2) USER INFORMATION RETENTION & FLOW FRICTION PENDING

Bottom sheet auto-dismisses immediately after toggling a single list.

SCREEN / FEATURE: add_to_list_bottom_sheet.dart

REFERENCE: [illegible]

User Impact: Adding one title to multiple custom lists (e.g. "Favorites" and "Must Watch") requires repeatedly tapping "Add to list" and waiting for the modal to reopen.

Recommended Fix: Retain sheet state; allow multi-selection with checkmark animations and a "DONE" button or drag dismissal.

Area 8: Icon Consistency

HIGH (P1) ICON CONSISTENCY FIXED **3 different back-button icons mixed arbitrarily across screens.**

SCREEN / FEATURE: Global App Navigation & AppBars

REFERENCE: [illegible]

User Impact: Visual incoherence: different weights, sharp vs rounded corners across screens.

Recommended Fix: Standardize exclusively on [illegible] across the entire app.

LOW (P3) ICON CONSISTENCY PENDING **Inconsistent bottom nav icon stroke styles (3 sharp, 1 rounded).**

SCREEN / FEATURE: shell_navigation_page.dart

REFERENCE: [illegible]

User Impact: Profile icon ([illegible]) has rounded joins while Shows ([illegible]), Movies ([illegible]), and Explore ([illegible]) have sharp geometry.

Recommended Fix: Unify bottom bar icons to all rounded variants ([illegible] , [illegible] , [illegible] , [illegible]).

Area 9: Button Labels & Microcopy

MEDIUM (P2) BUTTON LABELS & MICROCOPY PENDING

Default [illegible] is hardcoded to [illegible] .

SCREEN / FEATURE: app_confirm_sheet.dart

REFERENCE: [illegible]

User Impact: If a caller forgets to supply a label for non-destructive actions, the dialog button says "Delete".

Recommended Fix: Make [illegible] a required parameter or default conditionally based on [illegible] ([illegible] vs [illegible]).

LOW (P3) BUTTON LABELS & MICROCOPY PENDING **Sign Out sheet renders as a destructive red action.**

SCREEN / FEATURE: profile_page.dart

REFERENCE: [illegible]

User Impact: Sign Out is styled identically to "Delete Account", inducing unnecessary hesitation.

Recommended Fix: Pass [illegible] to [illegible] so it uses neutral brand accents.

LOW (P3) MICROCOPY PENDING **Empty state copy tells user "you need to touch some grass".**

SCREEN / FEATURE: notifications_page.dart

REFERENCE: [illegible]

User Impact: Sarcastic copy feels snarky or unprofessional to certain demographics without providing clear value.

Recommended Fix: Refine empty state copy to be witty yet helpful (*"All caught up! No upcoming airings scheduled for your tracked shows."*).

Area 10: Permission Management

HIGH (P1) PERMISSION MANAGEMENT PENDING **Silent toggle bounce-back when OS notifications are denied.**

SCREEN / FEATURE: settings_cubit.dart

REFERENCE: [illegible]

User Impact: User turns on notifications switch, it instantly flips back off with no message or guidance.

Recommended Fix: When permission request returns [illegible], show an [illegible] or dialog: *"Notifications are disabled in device settings. Tap to open Settings."*

MEDIUM (P2) PERMISSION MANAGEMENT PENDING

No contextual in-app pre-permission priming before triggering OS prompt.

SCREEN / FEATURE: Onboarding / First Watchlist Addition

REFERENCE: [illegible]

User Impact: Cold OS permission alerts have significantly lower acceptance rates than contextually primed prompts.

Recommended Fix: Trigger an educational bottom sheet explaining episode air countdowns and reminder benefits when the user adds their first show.

Area 11: Filter & Search Experience

HIGH (P1) FILTER EXPERIENCE PENDING

Phantom sort parameter: Sort option is accepted and returned, but completely missing from the UI.

SCREEN / FEATURE: shows_filter_bottom_sheet.dart & movies_filter_bottom_sheet.dart

REFERENCE: [illegible]

User Impact: Users cannot change sort order (e.g. by title, rating, or release date).

Recommended Fix: Either implement the Sort UI section above Progress, or remove the dead parameter and convert the sheet to [illegible].

MEDIUM (P2) COMPONENT PATTERN VIOLATION PENDING

Single-choice picker uses 2-button Apply/Reset bar instead of design system [illegible].

SCREEN / FEATURE: ShowsFilterBottomSheet & MoviesFilterBottomSheet

REFERENCE: [illegible]

User Impact: Violates Section 4 of [illegible]: *"Option menus & single-choice pickers: AppActionSheet... Apply the choice on tap (no Apply/Cancel)"*. Adds unnecessary friction.

Recommended Fix: Refactor to use [illegible] with instant selection and dismissal on tap.

MEDIUM (P2) SEARCH EXPERIENCE PENDING **No search history or recent search suggestions.**

SCREEN / FEATURE: search_page.dart

REFERENCE: [illegible]

User Impact: Repeated searches must be typed out completely every time; empty search state feels barren.

Recommended Fix: Store last 5 searches in [illegible] and render as tappable chips with a "Clear all" button.

Area 12: Text Visibility & Truncation

MEDIUM (P2) TEXT VISIBILITY & TRUNCATION PENDING **Aggressive 1-line truncation on 3-column grid cards.**

SCREEN / FEATURE: custom_list_details_page.dart

REFERENCE: [illegible]

User Impact: Movie/show titles with more than ~14 characters are truncated, making it hard to differentiate sequels or editions.

Recommended Fix: Increase [illegible] with [illegible] for titles in poster grids.

MEDIUM (P2) CONTRAST & VISUAL INTEGRITY PENDING **Hardcoded [illegible] icon in fallback builder.**

SCREEN / FEATURE: main.dart (FloatingActionButton fallback)

REFERENCE: [illegible]

User Impact: If the Lottie dice asset fails to load, the icon renders pure black on dark scaffold, becoming invisible.

Recommended Fix: Use [illegible] .

HIGH (P1) TOUCH TARGET SIZE & ACCESSIBILITY PENDING **Delete media badge touch target is only 21x21px.**

SCREEN / FEATURE: submit_feedback_sheet.dart

REFERENCE: [illegible]

User Impact: Violates 48x48dp minimum touch target rule (Section 4, [illegible]). Users struggle to delete attached screenshots.

Recommended Fix: Enlarge [illegible] touch region with minimum [illegible] .

4. Additional Production-Readiness Findings

4.1 Route Generator Bug (Critical Routing Defect)

In [redacted], the route generator splits incoming deep-link URLs and maps every integer identifier directly into a TV Show details page, even when the path is explicitly [redacted]:

```
[redacted]
```

User Impact: Deep links to movies (e.g. [redacted] or [redacted]) get incorrectly built as TV shows, causing TMDB 404 errors or corrupting the view hierarchy.

Recommended Fix: Inspect the route path segments: map [redacted] to [redacted] and TV show paths to [redacted].

4.2 Orphaned Screens in Codebase

Three significant features exist in the source tree but are dead/unreachable:

- [redacted] ([redacted]): Contains hardcoded mock data ([redacted], [redacted], [redacted]) with a non-functional SAVE button. Unlinked from the entire application.
- [redacted] ([redacted]): Fully implemented cubit and page for importing TV Time GDPR ZIP archives, but omitted from Settings data options.
- [redacted] ([redacted], [redacted]): Entire cinema tracking feature is commented out in Profile and Settings.

4.3 UI Performance Bottleneck on Profile Page

In [redacted]
([redacted]):

```
[redacted]
```

Performance Impact: Iterates synchronously through all movie and TV show episode lists on every single widget build (scrolling, tab changes, theme updates), causing frame drops on mid-range devices.

Recommended Fix: Memoize calculations or move them into a Cubit state object updated only when watchlist collections change.

4.4 FAB Collision on Profile Tab

Issue: In [redacted] (lines 995-1025), a floating action button for filters ([redacted]) floats at the bottom right. Because [redacted] already provides a center-docked Floating Action Button (the Surprise Me dice), the profile screen has **two competing floating action buttons** simultaneously, causing visual clutter and accidental taps.

5. Prioritized Issue Summary

Categorized according to business risk, user friction, and architectural impact:

P0: Critical (Usability, Trust & Data Integrity)

ISSUE-01:	FIXED	[redacted] silently masks [redacted] as an empty watchlist. *(Handled via AppErrorView with retry callback)*
ISSUE-02:	FIXED	[redacted] drops users abruptly to onboarding on any [redacted] . *(Retains shell when session exists, dispatches AppSnackbar.showError)*
ISSUE-03:	FIXED	[redacted] Terms of Service text is unclickable; Privacy Policy missing. *(Inline TextSpan with TapGestureRecognizer linked to Terms & Privacy)*
ISSUE-04:	PENDING	[redacted] displays hardcoded fake data ('Mj', '1993', 'Male') with no-op save.
ISSUE-05:	FIXED	[redacted] unconditionally maps movie URLs to TV shows. *(Checked path segments for 'movie' vs 'tv')*

P1: Major UX Problems (Key User Journeys)

ISSUE-06:	FIXED	[redacted] renders raw unformatted red error string without retry. *(Replaced with AppErrorView and retry action)*
ISSUE-07:	FIXED	[redacted] renders blank screen when empty. *(Added AppEmptyState with navigation CTA)*
ISSUE-08:	PENDING	[redacted] & [redacted] have phantom sort parameters.
ISSUE-09:	PENDING	[redacted] notification toggle silently bounces back when OS permissions are denied.
ISSUE-10:	PENDING	Removing custom list items requires an undocumented long-press.
ISSUE-11:	FIXED	Inconsistent back-button icons across pages (arrow_back_ios vs arrow_back_ios_new vs arrow_back_ios_new_rounded). *(Standardized globally on Icons.arrow_back_ios_new_rounded)*
ISSUE-12:	PENDING	Media deletion touch target in [redacted] is only 21x21px.

P2: Visual Polish & Architectural Consistency

ISSUE-13:	PENDING	Single-choice filter sheets use Apply/Reset bar instead of design system [redacted] .
ISSUE-14:	PENDING	[redacted] auto-dismisses after 1 tap, blocking multi-list selection.
ISSUE-15:	PENDING	[redacted] uses spinner instead of [redacted] shimmer grid.
ISSUE-16:	PENDING	[redacted] lacks search history and recent search chips.
ISSUE-17:	PENDING	Raw exception string exposed in [redacted] .
ISSUE-18:	PENDING	Synchronous expensive stats calculations in [redacted] .
ISSUE-19:	PENDING	Aggressive 1-line truncation on custom list detail poster cards.
ISSUE-20:	PENDING	Competing floating action buttons on [redacted] vs Shell center FAB.

P3: Nice-to-Have Refinements

ISSUE-21:	PENDING	Profile tab icon in bottom navigation bar uses rounded joined strokes while other tabs use sharp strokes.
ISSUE-22:	PENDING	Sign Out confirmation styled with destructive red error color instead of neutral brand tone.
ISSUE-23:	PENDING	Sarcastic notification empty state lacks navigation CTA.
ISSUE-24:	PENDING	Casing inconsistency in empty state action buttons (Title Case vs ALL CAPS).
ISSUE-25:	PENDING	Center FAB fallback icon uses hardcoded `□□□□□□□□□□□□`.
ISSUE-26:	PENDING	Orphaned `□□□□□□□□□□□□□□□□` and commented-out `□□□□□□□□□□□□□□` feature code.

6. Existing Implementations That Are Already High Quality

These components demonstrate exceptional craftsmanship and should serve as standard design-system references:

1. OfflineSyncBanner (Dynamic Island)

World-class iOS Dynamic Island integration that morphs the Island into an offline syncing pill on iPhone 14 Pro+ models, with seamless fallback pill on older devices.

2. AnimatedCheckButton Micro-Interaction

Exceptional haptic sequencing, particle explosion for season finales, WCAG-compliant semantics, and guaranteed 48x48dp touch target bounds.

3. AppSnackbar Architecture

Clean floating pill banner with contextual tints, custom icon badges, auto-dismiss timers, and action callbacks.

4. AppEmptyState Design System Component

Polished empty state with circular tinted icon backgrounds, clear typography, and compact mode for embedded tabs.

5. PolaroidShareModal 3D Tilt

Interactive 3D gyroscope tilt cards, ambient blurred background glow, and artwork picker for social sharing.

6. WatchProvidersSection Streaming Attribution

Clean streaming provider attribution with automatic user locale detection and categorized purchase/subscription options.

7. Recommended Reusable Components & Improvements

Architectural improvements to prevent future inconsistencies and reduce boilerplate:

AppLegalFooter

Reusable widget combining clickable Terms of Service and Privacy Policy spans with theme-aware colors for LoginPage, OnboardingPage, and SettingsPage.

AppSearchBar

Centralized search field with built-in clear button, debounce handler, and recent search history chip row.

AppGridSkeleton

Standardized 3-column poster grid skeleton loader to eliminate one-off CircularProgressIndicator screens across the app.

Standardized AppBackButton

Global back button enforcing [illegible], contextual contrast colors, and guaranteed 48x48dp touch bounds.

8. Phased Implementation Roadmap

Recommended delivery timeline and live implementation status:

Phase 1: Critical Fixes & Trust (Day 1)

- ✓ ~~Fix LoginPage to provide interactive links to TermsAndConditionsPage and PrivacyPolicyPage.~~ (Completed)
- ✓ ~~Fix MoviesPage error handling to render AppErrorView instead of masking errors as empty lists.~~ (Completed)
- ✓ ~~Fix DashboardPage error handling to replace raw red text with AppErrorView and retry button.~~ (Completed)
- ✓ ~~Fix AuthGate error handling to avoid booting users to onboarding on transient auth failures.~~ (Completed)
- ✓ ~~Fix onGenerateRoute in main.dart to support both /show/{id} and /movie/{id} paths.~~ (Completed)
- ☐ Remove or properly hook up EditProfilePage to eliminate hardcoded fake user data.

Phase 2: Usability & Functional Polish (Days 2–3)

- ✓ ~~Standardize back buttons across all pages to Icons.arrow_back_ios_new_rounded.~~ (Completed)
- ✓ ~~Add empty state to WatchedMoviesPage.~~ (Completed)
- ✓ ~~Fix Profile stat column width distribution and prevent "Episodes watched" from ellipsing.~~ (Completed)
- ☐ Enlarge media deletion touch target on SubmitFeedbackSheet to >= 48x48dp.
- ☐ Fix SettingsCubit notification toggle to show an explanatory dialog/snackbar when OS permission is denied.
- ☐ Refactor ShowsFilterBottomSheet and MoviesFilterBottomSheet to AppActionSheet with instant apply on tap.
- ☐ Add 3-dot overflow menu or helper subtitle on CustomListDetailsPage to make deleting items discoverable.
- ☐ Allow multi-list selection in AddToListBottomSheet without auto-closing.

Phase 3: Visual Polish & Performance (Days 4–5)

- ☐ Implement search history chips on SearchPage.
- ☐ Replace CircularProgressIndicator with skeleton grid in CustomListDetailsPage.
- ☐ Memoize expensive profile stats calculation out of ProfilePage.build().
- ☐ Clean up competing FAB on ProfilePage.
- ☐ Unify empty state button casing and bottom bar icon geometry.
- ☐ Integrate or clean up orphaned ImportTvTimePage in Settings.
